Project 1
Due Date: January 23
Points: 5

Go to the library and find a book which covers the basics of set theory (and introductory logic, if possible). The book should be understandable at an elementary level, that is, it should be usable as a resource for this course. Beware that a book entitled *Set Theory* is probably not what you are looking for this time around. Your assignment is to check such a book out and bring it to class. You must turn in an acceptable book by the due date listed above.

You may bring a book in before the due date to see if it acceptable or not. If it is not, then it will be returned to you and you can choose another. You may do this more than once before the due date; however, I will only accept one book per day.

If you need help looking for a book to meet your needs, I would suggest asking Trinity University’s mathematical sciences librarian, and generally super-helpful person, Barbara MacAlpine.
